LTI Intake Form

INSTRUCTIONS: *To initiate a request for consideration of a new Brightspace LTI, please provide required information for review by your school / department's Domain Admin. Your unit's Domain Admin will submit your completed request form for consideration by the Brightspace Governance Committee. All LTI requests should be submitted a semester in advance of when the tool will be needed in Brightspace (i.e. if required at the beginning of the Spring semester, please submit your request no later than the beginning of the preceding Fall semester).*

* = *Required Field*

Requester Info

Full Name*

Anthony Hall (TA to Professor Duke Bristow, sponsoring faculty)

USC School*

Dornsife College of Letters, Arts and Sciences

Department*

PHIL

Email*

athall @usc.edu

Alternate email

anthonythomashall3@gmail.com

Phone*

(858) 900-4347

Alternate phone

LTI Info

LTI Name*

LOCKqz

Vendor Company Name*

LOCKqz - built in-house at USC Marshall (Anthony Hall for Prof. Duke Bristow); not a commercial vendor

Vendor Website URL*

https://lockqz.com

Short Description*

LOCKqz lets an instructor give open-note quizzes in Brightspace while eliminating the use of AI. While a designated Brightspace quiz is open, it blocks AI assistants (ChatGPT, Claude, Copilot, Gemini, Perplexity and similar) on the student's own computer, then restores them when the quiz is submitted. It does not block the student's notes, files or the rest of the web. It is not a proctoring tool: no camera, microphone, screen capture, keystroke logging or recording of any kind.

LTI Functionality*

LTI 1.3 Advantage: (1) LTI launch so an instructor opens LOCKqz from inside Brightspace with single sign-on; (2) Names and Roles Provisioning Service (NRPS) so an instructor sees their own class roster with an installed / not-installed status per student; (3) optional, if permitted: Valence API access scoped to quizzing so LOCKqz can set a quiz's access password automatically (otherwise the instructor sets it by hand). Students install a small app once; it turns on only while a LOCKqz quiz is open and off when it is submitted.

Justification/Need for LTI*

AI has compromised open-note quizzes; Respondus blocks notes too. LOCKqz blocks only AI: free, no surveillance.

Expected Usage (i.e. # of users, classes, and/or departments per year)*

Pilot: Prof. Bristow's FBE courses (~50-150 students/yr), then any Marshall / USC instructor who opts in.

Semester Needed*

Fall 2026

Describe the LTI Pricing Model*

Free. No cost to USC, the department or students; no license or per-user fees. Hosted on Cloudflare free tier.

Any additional information to share?

Pilot works now with no privileged access; LTI makes it seamless for other instructors (target Spring 2027).
